

ECOCONTRACEPT

Integration of reused old smartphones into contraception dispensing machines to enable multifunctional capabilities.

Smartphone can be inserted and locked into to the vending machine

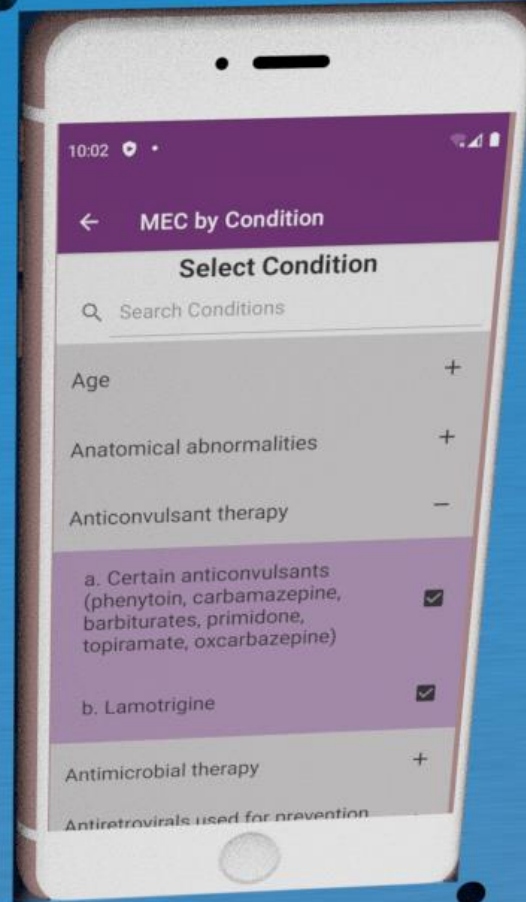

Smartphone is connected with charger which is charged via solar panel and power backup, the smartphone controls micro controller of the vending machine

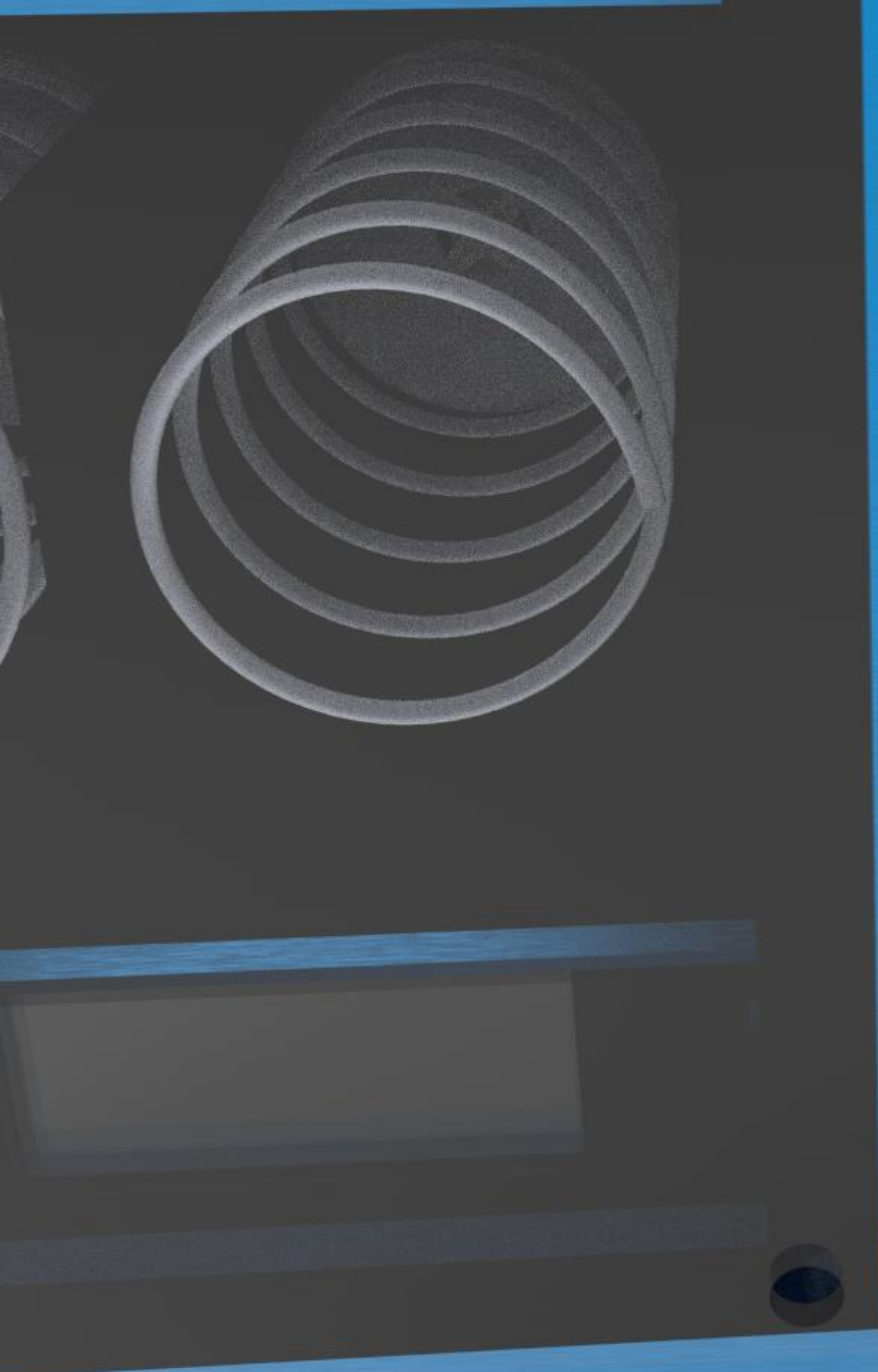

Various contraceptives are loaded into vending machine with out of stock alerts for Re-loading too via smartphone

Contraceptive getting dispensed out

Touch screen interface
combined with AI
assistant
guide the user to
choose the best
possible contraceptive
based on their
condition

Based on the chosen contraceptive method the products are dispensed from the vending machine the payment can be done by QR code, voucher code, UPI, even smart tap of cards is supported based on the type of reused smartphone, offline payment can be supported with UPI too for low internet connectivity areas

Suitable recommendations are suggested using AI system if required even doctor assistance can be offered by teleconsulting as it is a smartphone it has internet connectivity, SIM card, video camera and smartphone too
